PFAS Declaration of Conformity

Supplier declaration on per- and polyfluorinated alkyl substances (PFAS)

PFAS is an abbreviation for per- and polyfluorinated alkyl substances, which are often used in industrial processes due to their water, grease and dirt-repellent properties.

This group of substances comprises more than 10,000 different substances. PFAS do not occur naturally and have only been produced since the late 1940s. Chemically speaking, the organic compounds consist of carbon chains of various lengths in which the hydrogen atoms are completely (perfluorinated) or partially (polyfluorinated) replaced by fluorine atoms. Perfluorinated carbonic and sulfonic acids and their precursor compounds are used most frequently. Precursor compounds are substances that can be degraded to these persistent perfluorinated substances.

We hereby confirm that PFAS chemicals are not used in or contained in the manufacture of products that we sell.

This information has been compiled to the best of our knowledge and belief and on the basis of information provided by our suppliers.

The assurance of conformity is part of our supplier qualification.
